

Dear FCC Commissioners & Staff:

My name is Chey Barnes CEO of GOCOM ISP Corp in West Palm Beach FL. We began service in 1998 and have over 4000 customers.

We offer many servies that the RBOC cannot provide. We offer home service calls to customers that are having trouble setting up thier computers and we offer a computer recycle service where we will refurbish thier old PC in exchange for a yearly contract for service. We also provide 24/7 tech support with less than a 2 minute hold time.

We are now able to buy PRI lines through our own CLEC at much better prices than we were geting through Southern Bell but we are unable to provide DSL service through S.Bell, they simply will not offer it wholesale. As a result we are losing market share to Bell or the Cable company, since more and more of customers are demanding high speed broadband Internet access.

We ask that the FCC no longer discriminate against the independent ISP and force the ILEC to provide data broadband at wholesale much like the UNE-P model.

Thank you for your consideration in this matter.

C. Barnes

Sincerely,

C. Barnes
